

Equestrian Steel Ranch Rail

Components Per 8' Section

1 - 100" (8-1/3 feet) 3-1/2" x 5-1/8" Steel Post
3 - 114" (9-1/2") 1-3/8" x 5-1/8" Steel Rails

-Post Height 57" (4-3/4 feet)
-Top Rail Height 54" (4-1/2 feet)

The Summit Steel Rail Fence has the aesthetic appeal of traditional wood fencing but is much stronger and more durable. The steel is two-sided zinc galvanized and powder coated with architectural grade powder coating in combination with a zinc phosphate conversion coating for superior paint adhesion and rust protection. Its patented design includes steel rod reinforcements in the rails to enhance strength. The Summit Steel Rail Fence is highly visible with rounded smooth edges and no nails, screws or fasteners. The length of the rails allows them to flex for improved horse safety and the steel rod reinforcements enhance strength. When the rails are pushed or impacted, they will cushion the horse and spring back to a perfectly straight line. Even the most eager horse intent on escaping cannot break the rails and will remain safely within the fence boundaries.
